
WHAT IS IT?

Accessibility AI Audit

- A tool that helps make websites easier for everyone to use.
- It looks for accessibility problems.
- It creates a better version of the page.
- It gives a report so people can review the work.

**Helps
people use
the web**

WHAT HAPPENS?

Simple Process

- 1. Scan the website.
- 2. Find the main problems.
- 3. Improve the page.
- 4. Check the new page.
- 5. Give a report.

**Scan, fix,
check,
report**

THE TEAM

Who Does The Work?

- One automatic checker scans the page.
- One AI plans the work.
- One AI improves the page.
- Five AI reviewers check the result.
- The automatic checker is not an AI agent.

**1 checker
+ 7 AI
helpers**

WHAT IT CHECKS

Real User Needs

- Can people read the text clearly?
- Can screen readers understand the page?
- Can people use it with only a keyboard?
- Does it work well on a phone?
- Did important content stay on the page?

**Access for
more
people**

WHAT YOU GET

Clear Results

- An improved HTML page.
- A report that explains what changed.
- Screenshots and logs for review.
- Notes about any risks that remain.

**Useful
proof, not
guesswork**

What It Cannot Promise

- It cannot promise perfect accessibility.
- It cannot promise one fixed time or price.
- It does not replace human review.
- It helps with WCAG 2.2 work, but it is not a certificate.

**Helpful,
but not
magic**

WHY IT MATTERS

Better Websites For People

- More people can use the website.
- Teams get a faster starting point.
- Problems become easier to see and fix.
- The final decision still belongs to people.

**People
first**
